

An early start in the OT with the 2 uber efficient scrub nurses already prepping the first 2 patients for surgery

Following our December 2015 trip, Dr Shiva and his team heeded a lot of our team's advice on improving the OT equipment sterility standards.

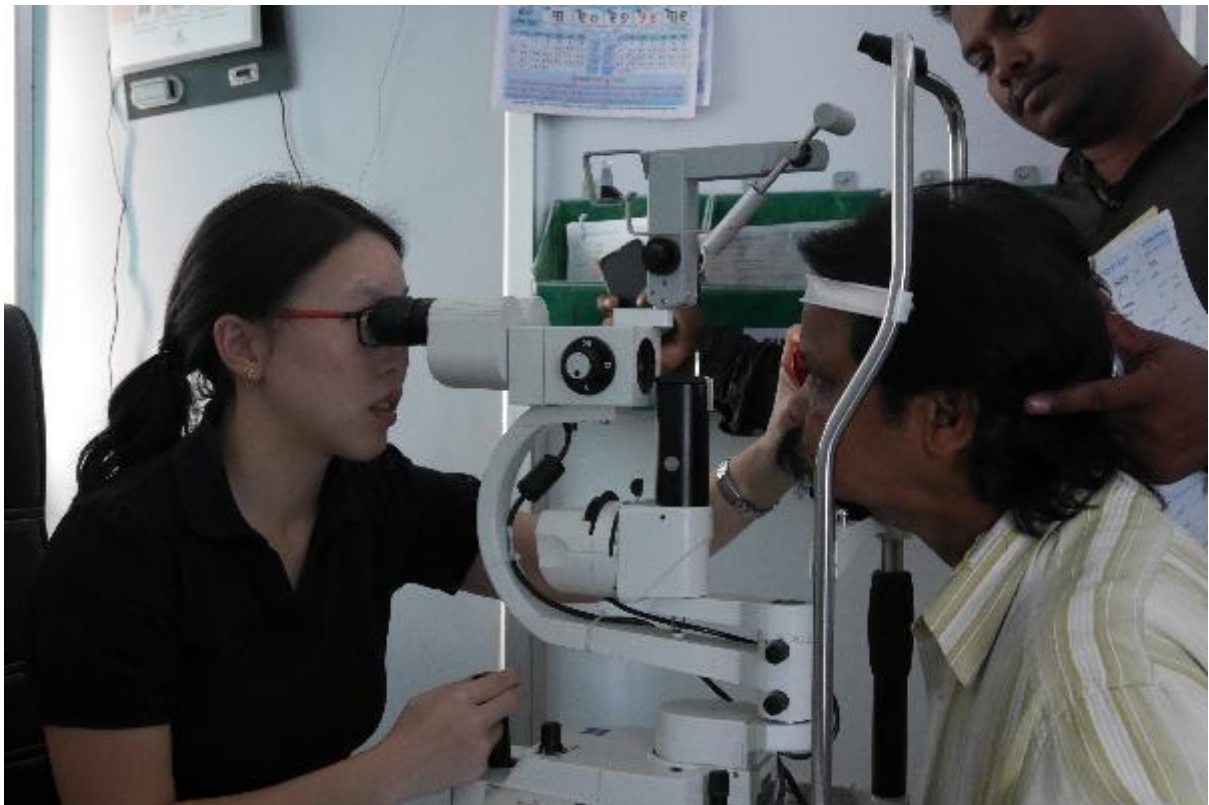

Patients are now draped with disposable items, all instruments are autoclaved and not chemically sterilised only, etc. His surgical technique has also improved further. Despite being slightly 'slower' (if you count 5min an eye as slow), his *trans-conjunctival* SICS surgery boasts increased safety, lower complication rates, and better patient comfort and post-op recovery.

Dr Shiva examining one of the patients with diabetic retinopathy

Jason scrutinising the findings

Grace shares part of the work load in examining the patients specially called back for our input

Jianping seeing cases

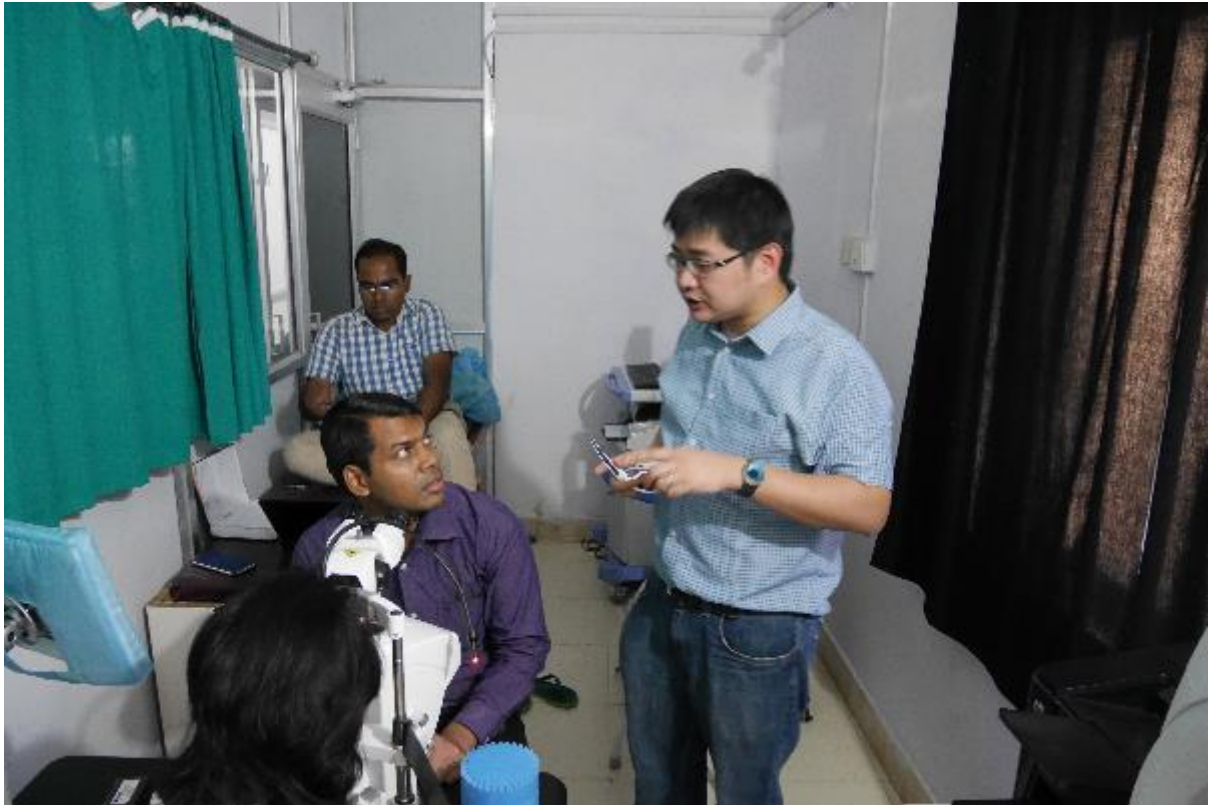

At the end of the day, Jason makes the final call for our team's recommendations.

Getting along well with TN's Dr Chittarangan

Jason's worst nightmare. A Vegetarian's heaven. Home cooked Indian vegetarian food for lunch!

Back to work. Providing guidance to Dr Shiva for PRP laser.

End of day!
